**Samples and Standards (Analytical Chemistry by Open Learning)** Brian W. Woodget, Derek Cooper

The first unit in this self-paced, self-teaching series supplies the fundamentals upon which subsequent volumes will build. Its coverage is organized around three topics: the analyst's approach, sampling, and standardization and calibration. Some of the material is quantitative and includes mathematical derivations. The text is supplemented with "real" examples to illustrate the application of these procedures and with self-assessment questions to test the reader's knowledge and understanding.
