Manual of Respiratory Protection Against Airborne Radioactive Material

U.S. Nuclear Regulatory Commission

Manual of Respiratory Protection Against Airborne Radioactive Material U.S. Nuclear Regulatory Commission

FOREWORD

This document, NUREG/CR-0041, Revision 1, "Manual of Respiratory Protection Against Airborne Radioactive Material," is issued as a technical supplement to the 1999 revision of Subpart H "Respiratory Protection and Controls to Restrict Internal Exposure In Restricted Areas" of 10 CFR 20, and to Regulatory Guide 8.15, "Acceptable Programs for Respiratory Protection," Revision 1, October 1999. It imposes no new requirements. Rather, it is intended to provide licensees with technical assistance on establishing and administering programs, to provide licensees with the technical bases for industry good practices, offer suggestions for program content, and present facts about problems previously experienced in respiratory protection programs. References to existing sources of useful information are used extensively.

The goal of every respiratory protection program is to protect the health of workers from injury caused by the inhalation of harmful materials, by exposure to inadequate oxygen concentration or poor quality breathing air, or by the inappropriate use of protective equipment. It is expected that the material provided in this Manual will contribute useful technical information to help achieve that goal.
