Neurobiology has undergone a revolution with many advances dependent on new techniques and approaches. This fully updated second edition reflects the recent growth areas in this subject. Its major themes are the fractionation and study of cellular and subcellular components of the nervous system, chemical neuroanatomy, and the measurement of neuronal metabolism *in vivo* and *in vitro*. Topics include the neuronal cytoskeleton; isolation of synaptosomes and their subcellular components; aspects of mitochondrial defects in neurones; and synaptic transport processes exemplified by the GABA transporter.
