Scheduling: Theory, Algorithms, and Systems

Michael L. Pinedo

Scheduling: Theory, Algorithms, and Systems Michael L. Pinedo

This new edition of the well established text *Scheduling - Theory, Algorithms, and Systems* provides an up-to-date coverage of important theoretical models in the scheduling literature as well as significant scheduling problems that occur in the real world. It again includes supplementary material in the form of slide-shows from industry and movies that show implementations of scheduling systems. The main structure of the book as per previous edition consists of three parts. The first part focuses on deterministic scheduling and the related combinatorial problems. The second part covers probabilistic scheduling models; in this part it is assumed that processing times and other problem data are random and not known in advance. The third part deals with scheduling in practice; it covers heuristics that are popular with practitioners and discusses system design and implementation issues. All three parts of this new edition have been revamped and streamlined. The references have been made completely up-to-date. Theoreticians and practitioners alike will find this book of interest. Graduate students in operations management, operations research, industrial engineering, and computer science will find the book an accessible and invaluable resource. *Scheduling - Theory, Algorithms, and Systems* will serve as an essential reference for professionals working on scheduling problems in manufacturing, services, and other environments. Reviews of third edition: "This well-established text covers both the theory and practice of scheduling. The book begins with motivating examples and the penultimate chapter discusses some commercial scheduling systems and examples of their implementations." (Mathematical Reviews, 2009)

From reader reviews:

Ramona Johnson:

Reading a guide can be one of a lot of task that everyone in the world enjoys. Do you like reading book so. There are a lot of reasons why people love it. First reading a publication will give you a lot of new info. When you read a guide you will get new information mainly because book is one of a number of ways to share the information or perhaps their idea. Second, studying a book will make a person more imaginative. When you studying a book especially hype book the author will bring someone to imagine the story how the people do it anything. Third, it is possible to share your knowledge to other individuals. When you read this Scheduling: Theory, Algorithms, and Systems, you could tells your family, friends along with soon about yours book. Your knowledge can inspire the mediocre, make them reading a e-book.

Laura Dumas:

Is it you who having spare time subsequently spend it whole day through watching television programs or just telling lies on the bed? Do you need something new? This Scheduling: Theory, Algorithms, and Systems can be the reply, oh how comes? A fresh book you know. You are and so out of date, spending your spare time by reading in this brand-new era is common not a nerd activity. So what these textbooks have than the others?

Erik Figaro:

As a university student exactly feel bored to reading. If their teacher questioned them to go to the library as well as to make summary for some reserve, they are complained. Just small students that has reading's soul or real their interest. They just do what the educator want, like asked to go to the library. They go to at this time there but nothing reading significantly. Any students feel that reading is not important, boring as well as can't see colorful photographs on there. Yeah, it is to get complicated. Book is very important for you. As we know that on this period, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. So , this Scheduling: Theory, Algorithms, and Systems can make you feel more interested to read.

Alicia Cain:

Reading a book make you to get more knowledge from that. You can take knowledge and information from a book. Book is published or printed or highlighted from each source this filled update of news. On this modern era like right now, many ways to get information are available for a person. From media social just like newspaper, magazines, science e-book, encyclopedia, reference book, book and comic. You can add your knowledge by that book. Isn't it time to spend your spare time to open your book? Or just trying to find the Scheduling: Theory, Algorithms, and Systems when you needed it?
