Gregor Mendel was one of the first people to practice the science of genetics. Yet he wasn't a scientist. He was an obscure monk living in poverty. His work was tedious and demanding. Although he published several papers describing his research, few people read them. He was ahead of his time, and his fame would not arrive until long after his death. Although he did not live long enough to see his work recognized, his experiments put him on the same level with the most celebrated scientists of all time.
