Weaving the Web : The Original Design and Ultimate Destiny of the World Wide Web by its Inventor
Tim Berners-Lee

Tim Berners-Lee, the inventor of the World Wide Web, has been hailed by *Time* magazine as one of the 100 greatest minds of this century. His creation has already changed the way people do business, entertain themselves, exchange ideas, and socialize with one another. With new online businesses and communities forming every day, the full impact of Berners-Lee's grand scheme has yet to be fully known.

Berners-Lee's creation was fueled by a highly personal vision of the Web as a powerful force for social change and individual creativity. He has never profited personally from the Web but has devoted himself to its continued growth and health. Now, this low-profile genius tells his own story of the Web's origins-from its revolutionary introduction and the creation of the now ubiquitous WWW and HTTP acronyms to how he sees the future development of this revolutionary medium. Today, Berners-Lee continues to facilitate the Web's growth and development as director of the World Wide Web Consortium and from his position at the MIT Laboratory for Computer Science.

Berners-Lee offers insights to help readers understand the true nature of the Web, enabling them to use it to their fullest advantage. He shares his views on such critical issues as censorship, privacy, the increasing power of software companies in the online world, and the need to find the ideal balance between the commercial and social forces on the Web. His incisive criticism of the Web's current state makes clear that there is still much work to be done. Finally, Berners-Lee presents his own plan for the Web's future, one that calls for the active support and participation of programmers, computer manufacturers, and social organizations to make it happen.

His vision of the Web is something much more than a tool for research or communication; it is a new way of thinking and a means to greater freedom and social growth than ever before possible.
