Enhancing Software Quality with Networked Thinking Alfons Unmuessig

Abstract

The presentation explains a method for further optimizing software quality and software error prevention. The current measures, e.g. the quality of the requirements analysis as an important influence factor of error prevention / software quality, are not replaced but looked at in a networked way before they are applied. The basic of the networked way is the networking of important measures e.g. quality of requirement analysis, workload of the employees, leadership of the management, achieved process maturity level (CMMI or SPICE,..) quality culture to get software quality. This allows us to recognize the priority of each individual measure by calculating the direct and indirect influence of the influence factors to software quality . The method/approach mainly focuses on the first three phases of the software development process: requirements analysis, specification, and design. The basis for the approach is networked thinking, which is supported by a software tool for the networking of the influencing factors and their analyses. See number [0], [4] of the references at the end of the presentation. The influencing factors are networked and their respective sum of direct and indirect influences on the target figure "software quality/error prevention" is calculated with the above mentioned software tool and depicted in a "results matrix".

Contents of the presentation

1. Motivation
2. Basis
3. Objectives
4. Procedure
5. Results
6. Practical Information
7. Conclusion & Outlook

Due to the prioritized presentation of the relationship between the influencing factors in the results matrix, the need for action for optimizing the software quality/error prevention can be deduced. Top priority influencing factors like e.g. motivation of the employees must be given high priority in practice.

The procedure of networked thinking proposed here can also be applied to many other areas of technology, medicine, biology, physics, urban planning, energy transition etc.

From reader reviews:

Christine Hook:

Have you spare time for just a day? What do you do when you have considerably more or little spare time? Sure, you can choose the suitable activity for spend your time. Any person spent their very own spare time to take a go walking, shopping, or went to often the Mall. How about open or even read a book allowed Enhancing Software Quality with Networked Thinking? Maybe it is to be best activity for you. You understand beside you can spend your time together with your favorite's book, you can cleverer than before. Do you agree with it is opinion or you have different opinion?

Abel Cooke:

Reading a reserve tends to be new life style in this era globalization. With studying you can get a lot of information which will give you benefit in your life. Together with book everyone in this world may share their idea. Books can also inspire a lot of people. A great deal of author can inspire all their reader with their story or their experience. Not only situation that share in the ebooks. But also they write about the data about something that you need instance. How to get the good score toefl, or how to teach children, there are many kinds of book that exist now. The authors these days always try to improve their ability in writing, they also doing some research before they write for their book. One of them is this Enhancing Software Quality with Networked Thinking.

Ralph Smith:

A lot of people always spent all their free time to vacation or maybe go to the outside with them family or their friend. Did you know? Many a lot of people spent they free time just watching TV, or playing video games all day long. If you wish to try to find a new activity that is look different you can read any book. It is really fun to suit your needs. If you enjoy the book which you read you can spent the entire day to reading a reserve. The book Enhancing Software Quality with Networked Thinking it is very good to read. There are a lot of people that recommended this book. We were holding enjoying reading this book. Should you did not have enough space to deliver this book you can buy typically the e-book. You can m0ore simply to read this book from a smart phone. The price is not very costly but this book has high quality.

William Rockwood:

Beside this specific Enhancing Software Quality with Networked Thinking in your phone, it could possibly give you a way to get closer to the new knowledge or details. The information and the knowledge you might got here is fresh from the oven so don't be worry if you feel like an previous people live in narrow commune. It is good thing to have Enhancing Software Quality with Networked Thinking because this book offers to you readable information. Do you often have book but you don't get what it's about. Oh come on, that won't happen if you have this in the hand. The Enjoyable set up here cannot be questionable, such as treasuring beautiful island. So do you still want to miss this? Find this book and also read it from at this point!
